

AFTERCARE AND RECOVERY

We insert the penis semi erect. Your erection may last up to 3-4 hours after the procedure. Medications are provided to keep the patient comfortable. The practitioner will see the patient 2 weeks after the procedure to ensure proper recovery. There is no charge for this follow up visit.

Think of this procedure like a “lunch time” penis girth enhancement with immediate results. Daily activities and work may resume immediately after treatment. There is no downtime required.

The filler needs to set in place over the next 2 weeks. Patients should avoid the gym and heavy exercise for 1 week following treatment. Sexual intercourse and masturbation may be resumed after 1 week.

HOW LONG DO THE RESULTS LAST?

The longevity of dermal filler varies largely depending on brand chosen. Manufacturers state that their fillers last for up to 12 - 24 months. We choose a high viscoelasticity property filler to provide maximum longevity and naturalness. Everyone’s body metabolizes soft tissue filler differently, depending on health, age, and lifestyle behaviors. The filler will gradually disintegrate into the surrounding tissues, resulting in gradual reversal of penile girth. Patients can opt for additional filler injections once the initial effects subside.

After the insertion, the body can form micro-capsules (microfibrosis) around the filler particles. This allows the filler material to maintain volume up to a couple of years and not completely degrade after some initial volume decrease.

**Results may vary. These results are not guaranteed.*

HOW MUCH SHAFT GIRTH WILL I GAIN?

The gain in girth depends on the amount of dermal filler placed in the penis.

HOW MANY SYRINGES DO I NEED?

Most patients require 6 - 15 syringes, or sometimes more, to achieve a desirable and an aesthetically pleasing result. Typical gain in girth with this technique and this amount of syringes results in a 20-35% increase in circumference. We cannot guarantee increase %.

COST OF PENILE GIRTH ENHANCEMENT WITH DERMAL FILLER

Treatment costs vary greatly depending on the individual’s needs and girth goals. Cost varies depending on the filler brand. Penile girth enhancement procedure packages are available.

Restylane Lyft/Contour/Defyne:	Juvederm Ultra PLUS/VolumaXC:
1 syringe @ \$800 *Refill only	1 @ \$850 *Refill only
4 syringes @ \$2950 *Refill only	4 @ \$3300 *Refill only
Full procedure packages	Full procedure packages
6 syringes @ \$4350	6 @ \$4800
8 syringes @ \$5700	8 @ \$6200
10 syringes @ \$6900	10 @ \$7500
12 syringes @ \$7800	12 @ \$8900
15 syringes @ \$9500	15 @ \$10,500

*Prices are for each single visit procedure. Additional syringes can be quoted.
 *Add up to 3-4cc PRP intra-dermal insertion to get maximum boost: additional cost of \$650 *dermal PRP takes 8-12 weeks to do its work
 **Add the P-Shot for maximum erectile boost to pair with your increased girth. Additional cost of \$1900
 ***Ask us about a Glans Augmentation procedure to also increase your penis head/glans girth.

Achieve More Girth Immediately

MOST PARTNERS SAY GIRTH MATTERS MORE THAN LENGTH

Penis size is a taboo topic for a lot of men, yet many privately suffer from a feeling of inadequacy due to small penis size.

Other men just want a slightly bigger penis to enhance the pleasure of their partner or boost their sexual self-confidence.

WHAT IS NON-SURGICAL GIRTH ENHANCEMENT?

Non-Surgical Phalloplasty, penile shaft girth enhancement with dermal filler, is a cosmetic procedure to increase the girth of the penis. During this treatment, the penis shaft girth is enlarged with dermal filler.

Dr. Bloy and our practitioners utilize very safe and effective hyaluronic acid fillers that produces excellent girth enhancement with physiologic resistance to external compression. The bio-elasticity of the material gives the penis a natural feel in both the flaccid and erect state. Patients have had safe and durable results with a very pleasing cosmetic appearance. This can even be used to increase girth for patients who have a penile implant.

As a Board Certified Physician and Surgeon who regularly performs procedures on men, Dr. Bloy has expertise of the anatomy and physiology of the body and genitalia. Our practitioners have been thoroughly trained by Dr. Bloy and deliver the same skill and expertise.

Studies from the University of Texas have shown that 90% of partners prefer an increase in penile girth (width) over an increase in length. Also, clinical studies have shown that 85% of patients are completely or mostly satisfied with their results. 90% of patients report no filler loss after over 1 year. Most noteworthy: NO complications are common or noted.

WHAT CAN PENILE GIRTH ENHANCEMENT DO FOR ME?

Patients should have realistic expectations. Non-surgical phalloplasty will increase the girth of the penis but it will not make the penis twice the size. Our procedure increases girth, not length. Across the nation, there are thousands of men who are thrilled with their penile girth enhancement with dermal filler procedure's results.

As a leader in this penis enlargement procedure, Men's Contemporary Health Center uses the most advanced materials & techniques currently available.

THE BENEFITS OF PENILE GIRTH ENHANCEMENT:

- Non-surgical
- Office-Based Procedure
- Immediate results
- Treatment takes under 1 hour
- No reported complications
- Many get sustained enhancement of 2 years or more from filler and the body's reaction to it
- No stitches, scars or anesthesia
- Minimal to no discomfort
- Enhances while both flaccid and erect
- No downtime from work and daily living
- Resume sexual activity in 1 week

WHO IS A CANDIDATE?

Just about any man who desires to increase the girth of their penis shaft without undergoing surgery. The patient is ALWAYS involved with the treatment plan. Simply schedule a consultation with our practitioner to have a private discussion with him about your concerns, goals and needs. Those who are hypersensitive to filler or are experiencing active inflammation and/or infections at the injection sites are contraindicated from having this procedure.

WHAT PRODUCT IS USED FOR GIRTH ENHANCEMENT?

This technique for penis widening utilizes the insertion of hyaluronic acid fillers like Juvederm Voluma XC or XC Plus, and Restylane Defyne. These high-tech fillers are placed beneath the skin to increase the width of the penis. There are several advantages to the use of filler over other more invasive techniques. Filler is inserted through a tiny insertion point, can be smoothed into place, and has a very high satisfaction rate.

Dr. Bloy has perfected this non-invasive procedure that can enhance the penile girth size and shape through painless insertion of fillers that immediately increase the girth of the penis. These types of fillers are made from **hyaluronic acid – a naturally-occurring hydrophilic sugar substance in the skin** – which is safe and holds water, plumping the treatment area for long-lasting girth enlargement and rejuvenation. This can also be combined with PRP dermal injections for a maximized effect.

WHERE IS THE PROCEDURE PERFORMED?

Your procedure is performed in our private treatment room. We specialize in non-surgical shaft girth enhancement for penis enlargement. This 1 hour office-based procedure does not require surgery, and the phalloplasty we offer is far simpler and safer.

WHAT IS THE GIRTH ENHANCEMENT PROCEDURE?

This procedure should only be performed by an experienced, highly skilled, certified medical professional under strict aseptic medical standards. Prior to treatment, the patient's medical history will be thoroughly reviewed. Once the patient is deemed suitable, the medical practitioner will sanitize and numb the penis using a strong prescriptive numbing cream. The hyaluronic acid filler is then slowly inserted just below the superficial layer of dermis. This increases the shaft girth of the penis. The penis is numbed so patients are free of any pain and discomfort during the procedure.
